<u>ABSTRACT</u>

Now a days the hotels are common in all the places not only in the tourist places .

So here in my project I developed an app that helps the people to organize there hotel. This is an app that is used for in hotel purpose. That is in-order to take food orders, contact issues, room services. And our project offers a better platform as it works by using whatsapp where message can be sent easily and get immediate attention.

Functionality:

- Email login with firebase.
- Profile by using firebase current user info.
- Gridview for services offered.
- Recycler view for the food menu.
- Card view for the food menu.
- Revoking whatsapp from our app.
- Revoking mail from our app.
- Splash screen in the beginning.

Operating system Requirements:
Android 6.0+
